Serial No.: 10/718,122 Filing Date: November 20, 2003

Group Art Unit: 1725 Examiner: Maria Alexandra Elve Atty. Docket No.: ETH5081USNP (102863-23)

## AMENDMENTS TO THE CLAIMS

(Currently Amended) A method of laser drilling a vibrating workpiece, comprising:
providing a workpiece engaged by a first vibrating frame of a vibrating machine, wherein the
workpiece is vibrating substantially in unison with the first vibrating frame;

providing a laser apparatus mounted to a second frame, wherein the second frame is substantially isolated from the vibrating frame and does not vibrate[[,]];

providing a spherical focusing lens that is mounted to the first vibrating frame, wherein the spherical focusing lens is vibrating substantially in unison with the first vibrating frame;

aligning the laser apparatus and the spherical <u>focusing</u> lens such that a laser beam emitted by the laser <u>apparatus</u> is directed through the vibrating <u>spherical focusing</u> lens to a target location on the vibrating workpiece; and[[,]]

causing the laser <u>apparatus</u> to emit a beam through the spherical <u>focusing</u> lens, wherein the beam is stationary with respect to the vibrating spherical <u>focusing</u> lens, and wherein the beam strikes the vibrating workpiece at the target location.

- 2. (Original) The method of claim 1, wherein the laser comprises an Nd-Yag laser.
- (Original) The method of claim 1, wherein the workpiece comprises a surgical needle.
- (Original) The method of claim 1, wherein the laser beam is pulsed.
- (PreviouslyPresented) The method of claim 1, wherein the workpiece is mounted to a fixture which is mounted to the first vibrating frame, wherein the fixture vibrates substantially in unison with the first vibrating frame.
- (Currently Amended) An apparatus for laser drilling a vibrating workpiece, comprising: a workpiece mounted to a first vibrating frame;
- a laser apparatus mounted to a second frame, wherein the second frame is substantially isolated from the <u>first</u> vibrating frame and is substantially non-vibrating; and,
- a spherical focusing lens mounted to the first vibrating frame for directing a laser beam emitted by the laser <u>apparatus</u> to a target site on the workpiece, such that the <u>spherical focusing</u> lens

vibrates substantially in unison with the first vibrating frame, while the laser beam is substantially stationary with respect to the vibrating spherical focusing lens.

- 7. (Original) The apparatus of claim 6, wherein the laser comprises an Nd-Yag laser.
- 8. (Original) The apparatus of claim 6 wherein the workpiece comprises a surgical needle.
